 - The contents of this lesson are only for use and dissemination in secure spaces.
 - Only for the use of the Virtual 158th Fighter Wing and designated associates.
 - **NOT FOR ACTUAL USE**
-

What are SUA's/MOA's

MOA

- **MOA:** MOA's consist of airspace of defined vertical and lateral limits established for the purpose of separating certain military training activities from IFR Traffic. Whenever a MOA is being used, non-players may be cleared through if IFR separation is provided by ATC. Otherwise, ATC will reroute or restrict non participating IFR traffic.
- **Examples:** Activities conducted in MOA's include but limited to: air combat tactics, air intercepts, aerobatics, formation training and low-altitude tactics. Military pilots flying in MOA's are exempted from the provision of 14 CFR section 91.303(c) and (d) which prohibits aerobatic flight within Class D and Class E surface areas, and within federal airways.

SUA's

- **PROHIBITED (P)**
 - Flight is **PROHIBITED** at all times
 - Examples: P-56 (White house), P-40 (Camp David)
- **RESTRICTED (R)**
 - Contains Hazardous activities (artillery, aerial gunnery, missiles
 - **Entry requires permission from controlling agency** when active
 - May be “cold” Inactive - check NOTAMs or contact controlling agency
- **WARNING(W)**
 - Similar hazards to Restricted areas but over international waters
 - **No permission required, but extreme caution advised**
- **MOA (Military Operations Area)**
 - Military training activities
 - **VFR Flight permitted but not recommend when active**
 - Contact FSS or controlling agency for activity status.

.

How to use MOA's/SUA's

How to use SUA's

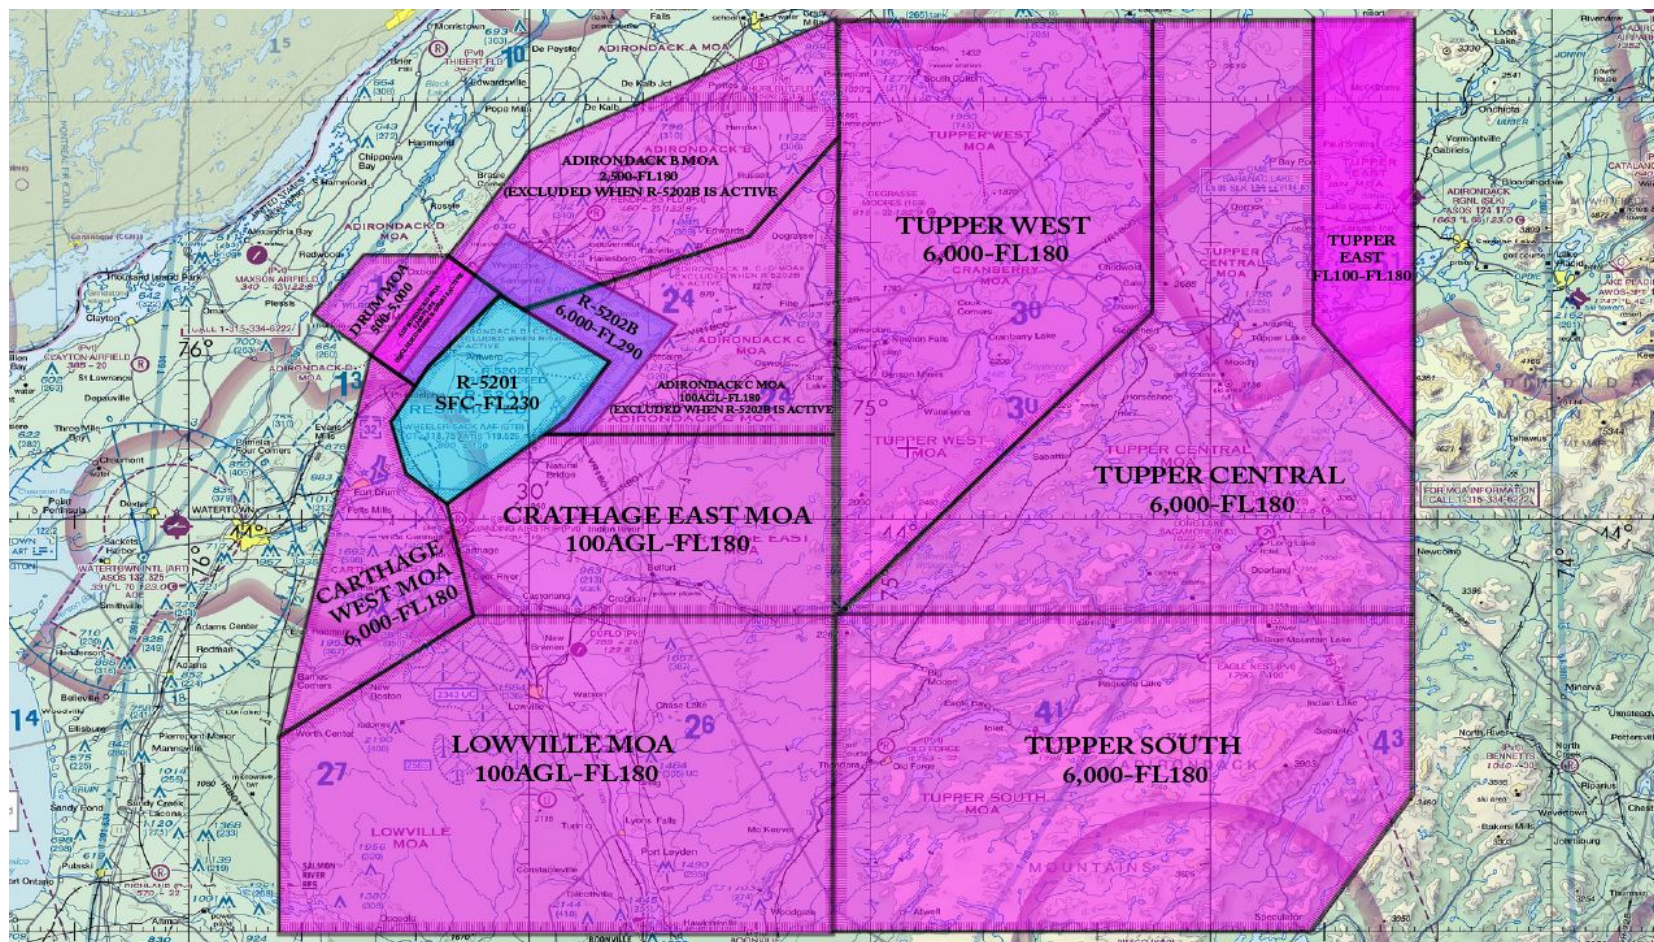

- **Activating.** When activating a MOA pilots must state the confines of the airspace they wish to operate in as well as time; for example.
- (C/S) We'd like to Activate the Viper Complex Block 8,000 to 17,000 for the next 45 minutes.
- Ensure to readback ATC's Reply where operations are confined to.
- Pilots are to remain inside of the confines of the established airspace vertically and laterally.
- Pilots are allowed to "push tactical" when advised, in this case being 226.8 for Viper Complex Common.

How to use SUA's

- **To confirm a MOA is active:** Pilots should use this comms flow:
- "Center/Departure, BULLY 1-1, show WESTOVER ONE MOA as hot and active at this time"
- **Deactivating.** When leaving pilots must close the MOA, with the call:
 - (C/S) Leaving the Viper Complex at LAGGS we'd like to close the MOA.
 - Pilots may no longer MOA Commons or "Tactical" once out of the confines, and should switch to respective center comms.

Additional Study Material
