Strike Coordination and Reconaissance (SCAR)

SCAR

Strike Coordination and Reconnaissance, or SCAR, is a specific mission flown for the purpose of detecting targets, as well as performing attacks and/or reconnaissance on the desired targets. SCAR missions are flown in support of air interdiction, therein detecting, attacking, and surveilling adversary ground assets. SCAR assets are often responsible for neutralizing adversary air defenses and providing Battle Damage Assessment (BDA) for other interdicting assets.

Typical SCAR tasks include cycling multiple attacking assets through the designated target area, prioritizing guidance and air defense updates to maximize sortie effectiveness and survivability.

Roles within SCAR include Air Interdiction (AI) and Armed Reconnaissance (AR). Typically, a coordinator will monitor the kill zone or kill box and provide deconfliction for aircraft in the area. Alongside the coordinator, a striker or strikers will enter the area of operations, and will be tasked accordingly by the coordinator.

Employment

SCAR assets will be tasked with three static objectives:

INVESTIGATE: Verification and coordination of forces, rules of engagement (ROE), positive identification (PID), and collateral damage estimation (CDE).

TARGET: Targeting tasks will be given after ROE, PID, force coordination, and guidance requirements regarding the specified target are satisfied. Target and track correlation are the primary objectives of TARGET.

SMACK: Employment of ordnance on surface targets through the coordination of ROE, PID, CDE, and forces. Instead of close air support engagement, SMACK tasking consists of the specific destruction of assets within a kill box, target, or track.
